Reviews

This book is definitely not straightforward to get started on studying but extremely exciting to read. It is really simplistic but shocks in the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

CHILDREN IN FOSTER HOMES, VOL. 16: A STUDY OF MENTAL DEVELOPMENT (CLASSIC REPRINT)

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Children in Foster Homes, Vol. 16: A Study of Mental Development Dr. Skodak s study is part of an extensive Station research program devoted to inquiries into the mental development of children. It is of particular interest as a complement to the recently published monograph A Study of Environmental Stimulation: An Orphanage Preschool Project by Skeels, Updegraff, Wellman and Williams. The present study traces in some detail the mental growth of a large group of children placed early in foster homes, relating the work not only to other studies in the Station but to the publications of Burks, Freeman, Jones and Leahy. In general the IQ of a foster child during these preschool years is related not to the genetic constitution as derived from true mother and true father, but to the quality of the home in which he now lives. Of one thing we can be reasonably sure: the older idea that a gain or loss of as much as 20 IQ points must be exceedingly rare is definitely not valid for these young children. All measures of correlation and central tendency in this and allied Station studies demonstrate that, for young children subjected to demonstrably changed environments, substantial shifts are the rule rather than the exception. Nor can this be taken as a measure of the unreliability or futility of intelligence testing. Rather, to a significant extent (lying beyond the probable errors of measurement), such shifting indicates real losses and gains in the relative mental standing of the children involved.
